

VIRTUAL REALITY SYSTEMS AND METHODS

ABSTRACT OF THE DISCLOSURE

- Virtual reality system facilitating the setup and conduction of a virtual reality
- 5 episode by receiving virtual reality data captured by virtual reality environment (VRE) user equipment, and transmitting the virtual reality data via a network to other virtual reality components capable of presenting the virtual reality data. The setup and conduction of the virtual reality episode occurs in real-time, such that a user can participate in an episode that represents events presently occurring in an environment.
- 10 The VRE user equipment includes wireless devices such that one or more mobile users at a plurality of locations may simultaneously participate in a virtual reality episode.
